

# Bridging Ecology: Translating Science into Collaboration, Education, and Community Impact

Miranda Sams

# Graduate School

- MS Thesis:
  - Patterns of Benthic Macroinvertebrate Diversity and Composition in a Spatially Complex River Basin: *Taxonomic and Functional Trait Approaches*
- PhD Work:
  - Seasonal variation of Macroinvertebrate Diversity and Composition in a Spatially Complex River Basin: *Taxonomic and Functional Trait Approaches*
  - Spatial Scale Effects on Macroinvertebrate Diversity and Composition: *Taxonomic and Functional Trait-based Approaches*
  - Drivers of mercury between aquatic and terrestrial environments (macroinvertebrates & riparian spiders)
  - Spatial variation of mercury in Texas (East to West)

Chumchal et al., 2022

***Where is all this leading?***

# The Vision: A Career with Purpose

## Scientific Translator

- Ecology-based Research
- Collaborative Projects
- Science Education

*Potentially an NGO position?*

# The Key: Collaboration

- Spreads the workload
- Higher quality work
- Strengthens science overall

*“If you want to go fast, go alone. If you want to go far, go together.”*

*–African Proverb*

**What's one thing you've  
experienced that makes  
collaboration challenging?**

# The Problem: Communication Breakdown

- Jargon & Ego
- High complexity (*Multidisciplinary models*)

***What is something that makes scientific communication bad?***

Gatekeeping Facts only  
Distance Complexity Deficit model  
Uncompassionate communicator Boring  
Ego Over Interpretation  
Complex graphs Oversimplification  
Statistics Snobbism Misunderstanding  
Narcissism Bias

# Benefits of a Scientific Translator

Bridges natural and social sciences, universities, NGOs, agencies, and local communities

Facilitates communication *and* coordination

Unlocks larger funding opportunities

# The Scientific Translator in Action

Teach interdisciplinary courses to smaller groups

Lead interdisciplinary research to tackle real-world problems

Build cross-sector collaboration  
*NGOs, agencies, universities, policy makers, etc.*

Engage communities to translate science into action  
*Unpacking the Black Box: Demystifying ecological models through interactive workshops and hands-on learning — Herman et al. 2019*

## A Model to Imitate

*“The environmental science program provides broad preparation in the sciences, equipping you for careers in wildlife biology and conservation, environmental restoration, soil and water management, and environmental education, or for successful entry into graduate school.”*

## A Model to Imitate

- *Hands-on training & field work*
- *Interdisciplinary coursework*
- *Smaller class sizes*

# Serve. Protect. Restore.

---

AU SABLE INSTITUTE

[ausable.org](http://ausable.org)

## A Model to Imitate

*“The Au Sable Undergraduate Research Program is designed to address pressing questions in ecology, conservation, and restoration; serve local environmental agencies and organizations with informed data, and prepare students as scientists by involving them in laboratory and field research. By partnering with local non-governmental organizations and government agencies, Au Sable advances scientific understanding using foundational and cutting-edge modes of inquiry and helps decision-makers make informed plans to advance environmental stewardship.”*

# Serve. Protect. Restore.

AU SABLE INSTITUTE

[ausable.org](http://ausable.org)

## A Model to Imitate

- *Hands-on training & field work*
- *Community outreach*

# Serve. Protect. Restore.

AU SABLE INSTITUTE

[ausable.org](http://ausable.org)

## A Model to Imitate

- *Hands-on training & field work*
- *Community outreach*

# Recent Models and Examples

## University of Wyoming's CURE Program

Hands-on research experience for undergraduates

## Science Communication Workshops

Identifying good and bad communication

Enhance community engagement

## Watershed Institute in New Jersey

Certification programs and report cards to engage communities

Environmental Youth Leadership Programs

# A Year in the Life: *The Seasonal Model*

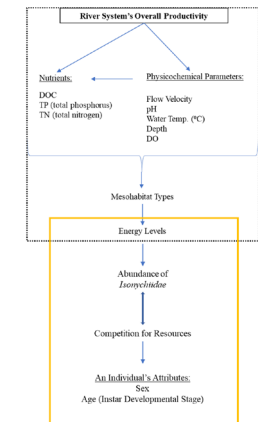

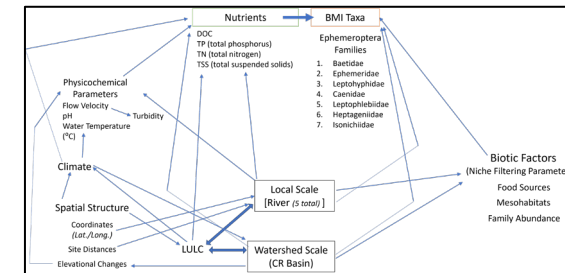

# A Year in the Life: *The Seasonal Model*

- Collaborative Research

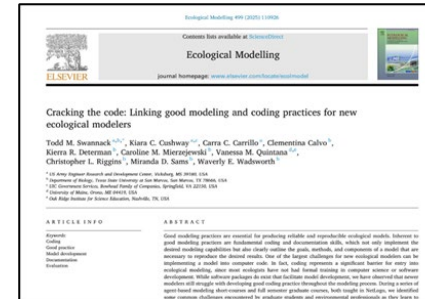

- Stakeholder-mediated modeling engagements

# A Year in the Life: *The Seasonal Model*

- Writing & Publishing

- Local community outreach programs

# A Year in the Life: *The Seasonal Model*

- Interdisciplinary workshops

- Community science programs

Conservation Resource Alliance

- Stakeholder-mediated modeling engagement

# A Year in the Life: *The Seasonal Model*

- Field Courses

- Undergraduate mentoring programs

# A Year in the Life: *The Seasonal Model*

- Teaching interdisciplinary courses/workshops

- Leading multidisciplinary research projects

- Building collaboration

- Engaging communities

# Steps Towards My Career Vision

## Building Blocks

- Leadership
- Science communication
- Collaborative interdisciplinary networks
- Research & Analytical skills

## Mentors & Models

- Academic Partners (Au Sable & Cedarville)
- NGOs
- USACE

# Steps Towards My Career Vision

## Building Blocks

- Leadership
- Science communication

Primary networks
